- ▲ Individual solution for asymmetry
- ▲ Minimizes sliding and shear forces
- ▲ Optimal adjustment to the body's contours for equal pressure distribution

The Vicair Adjuster 02 consists of 5 individual compartments, designed to contour under loading. Each compartment is designed to influence a specific area of the pelvis, striking a unique balance between preserving skin and underlying tissue at the ischials, coccyx and trochanters, positioning the pelvis and supporting the femurs. For specific needs the filling of each of the 5 compartments can be easily adjusted. Allowing you to change the density of each compartment benefitting users who: (1) need accommodation of a mild to severe fixed pelvic obliquity or correction of a flexible pelvic obliquity; (2) benefit from additional support of the thighs, for instance users with an above knee amputation.
